

# Object Recognition System

## Key Features:

- Application in **Object Detection** and **Smart Perimeter Protection**
- Supports existing IP camera system
- No need for internet connection (**cloudless**)
- All data can be stored on premises
- Multiple boxes can be stacked to support more video channels
- Individual alarm actions for each camera connected
- Assembled in Austria and **GDPR compliant**

## Object Detection

With its flexible architecture, DEKI software can be trained to **detect and recognize any object** important for your business or clients. The rate of successful recognition continuously adapts and improves over time.

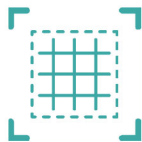

## Security & Safety

Nothing beats local computing when it comes to security. All recognition happens locally and data can be stored on the premises (**cloudless**), making the system **secure and GDPR compliant**.

## Statistics & Data

All the relevant information you will gather through the Safebox can be used to automatically generate powerful **statistics & safety reports**.

## Perimeter Protection

With our Smart Perimeter Protection, you can draw **custom sized virtual fences and lines** directly in the video stream around areas you want to protect. Trigger alarms upon entry, exit, line crossing, or if an object stays in the marked area longer than allowed.
